linsen centrum

SCLERAL LENSES:

POSSIBILITIES AND LIMITATIONS ON PATHOLOGICAL OCULAR SURFACES

Markus Ritzmann, MSc. BSc. Optometry and Vision Science, FAAO, FSLS

Markus Ritzmann

linsen centrum

- Msc. Bsc. Optometrist FAAO FSLS SBAO
  - Fellow of the Scleral Lens Education Society since 2019
- Specialized in scleral lens fitting since 2012
- Head of specialty lens clinic Linsencentrum GmbH, Switzerland
  - >80% specialty lenses
    - 60% scleral lenses
    - 20% RGP's on irregular cornea
    - 20% Myopia controll

Disclosures

linsen centrum

- Former employee and consultant of Falco Linsen AG, Switzerland
  - All cases were fitted with Falco scleral lenses at the specialty lens clinic Linsencentrum GmbH

Objectives

linsen centrum

- Knowing the gerneral indications for ScCL
- Learn a practical ScCL fitting approach for a variation of ocular conditions
- Understand the possibilities, limitations and contra indications in pathological conditions

linsen centrum

INDICATIONS FOR SCLERAL LENSES

General indications for ScCL

linsen centrum

- Show a high wearing comfort and excellent optical imaging properties
- Are particularly suitable for irregular astigmatism
- Are also used therapeutically to protect the cornea or for cosmetic correction
- Can be further used for normal eyes for everyday activities, sports, hobby...

SCL for pathological cornea changes

linsen centrum

Indications for scleral lenses compared to other lens modalities

- Visual rehabilitation of irregular astigmatism
- Expositions keratitis, severe dry eye conditions
- Optic-Cosmetic indications
  - Iris defects
  - Partial or full occlusion

linsen centrum

PART I
IRREGULAR ASTIGMATISM

Irregular corneal conditions

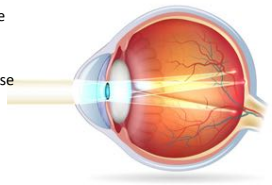
linsen centrum

- **Main purpose: Visual rehabilitation for irregular astigmatism**
  - Keratoconus, PMD, Keratoglobus
  - Secondary Ectasias
  - traumatic or infectious corneal scarring
  - Various pathological irregularities

«Remember the optics!»

linsen centrum

- Cornea is the first refractive surface (tearfilm)!
  - Responsible for roughly 2/3 of the total refraction of the eye
  - Every irregularity on the corneal surface in the optical axis will cause decresed vision



Bildquelle: Forest Eye Surgery

Optical indices

linsen centrum

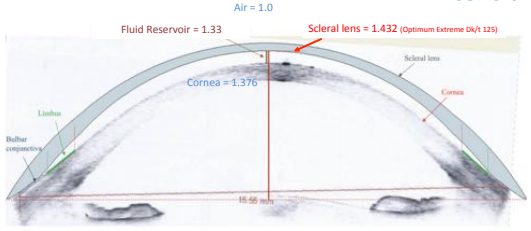


Abb: Clinical Guide for Scleral Lens Success Melissa Barnett, Daddi Fadel

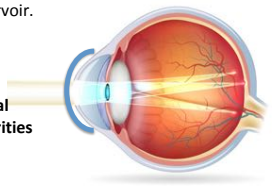
«Remember the optics!»

linsen centrum

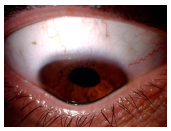
- Scleral lenses replace the first refractiv surface, vaults it and creates a new optical system with the fluid reservoir.
- → Eleminiation of most irregular astigmatism
- **All intra corneal, posterior corneal irregularities, scars, lens irregularities "cannot" be compensated!**



Bildquelle: Forest Eye Surgery

The «classic» case

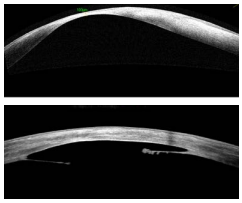
linsen centrum



Keratoconus

linsen centrum

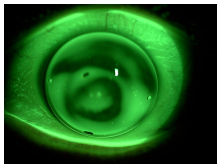
- ScCL's are well suited medium to high-grade Keratoconus including:
  - ICRS in Keratoconus
  - Post CXL
  - Post Hydrops
  - PMD
  - Keratoglobus



Keratoconus

linsen centrum

- ScCL's are alternative to RGP fitting
  - for unilateral fits
  - Comfort issues with RGP's
    - 3/9 Staining and irritation with RGP's
  - Apical erosions & scarring due to flat fitted RGP's
  - Extreme cones, steep base curves <5.50mm (limits of RGP's)
    - Lens movement almost impossible with parallel fits



Quant-specific KC lens
BCr_0: 5.40mm, x+50µm, Ø 10.60mm

Keratoconus

linsen centrum

- Often visual improvement compared to RGP's
  - VA often better and more stable due to «static seat» vs. unstable optics of corneal RGP lenses
- Beware with VA forecasts in mild Keratoconus
  - Low anterior corneal irregularities (Topography) with high «posterior float»
  - many times better VA with soft lenses
- «cerebral» Keratoconus
  - Neural adaptation: New scleral lens optics partly not tolerated

Keratoconus

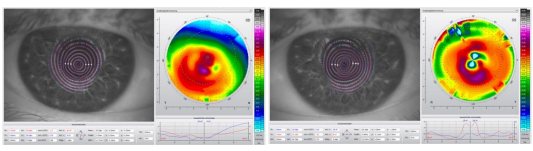
linsen centrum

- Post CXL: lenses can be worn again 4-6 weeks after CXL
  - With Epi-ON even after 2-3 weeks post-surgery
  - Lenses do not need to be changed Post-CXL (or only marginally)
  - corneal RGP lenses need to be adapted again and again due to flattening of cornea
- In progressive Keratocone (pre-operative):
  - easier monitoring and shorter CL-abstinence for measurements

Case #1 Keratoconus

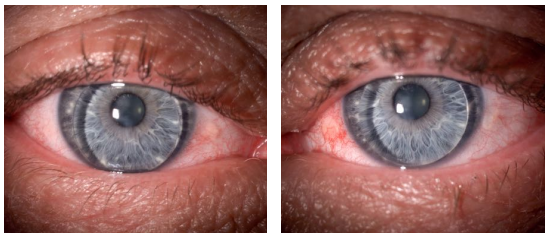
linsen centrum

	$Vis_{cc\ CL\ old}$	Ref. (dpt)	$Vis_{cc\ glasses}$	K_{flat} (mm)	K_{steep} (mm)	
OD	0.5^{+3}	-8.25 -4.00 68°	0.2	5.96	5.72	Keratoconus
OS	0.3^{+2}	~-11.50	0.1	5.69	5.43 (manual capt.)	Keratoconus



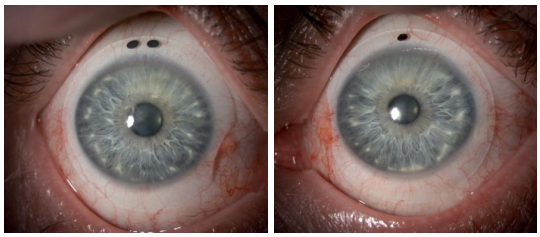
Case #1 Keratoconus

linsen centrum



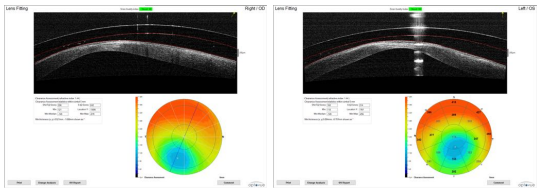
Case #1 Keratoconus

linsen centrum



Case #1 Keratoconus

linsen centrum



Case #1 Keratoconus

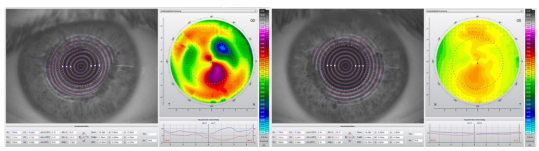
linsen centrum

- **Outcome**
  - Huge improvement in all day wearing comfort
  - Obvious reduction of conjunctival redness
  - 3/9 staining no longer occurred
  - Vis_{cc}: OD: 0.8pp (before 0.5^{+3}) OS: 0.6 (before 0.3^{+2})
- **Challenges:**
  - Piguecula notching necessary

Case #2 Unilateral Keratoconus with ICRS

linsen centrum

	Vis_{sc}	Ref. (dpt)	$Vis_{cc\ Brille}$	K_{flat} (mm)	K_{steep} (mm)	
OD	0.2p	+2.75 -4.50 46°	0.9p	7.89	7.17	KC with ICRS
OS	1.50	+0.25	1.50	7.79	7.59	normal

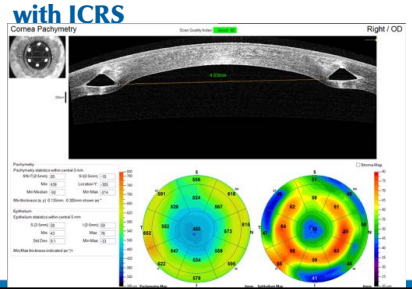


Case #2 Unilateral Keratoconus with ICRS

linsen centrum

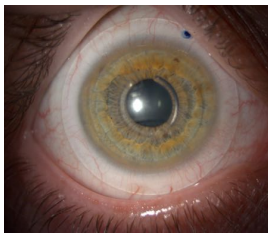
Case #2 Unilateral Keratoconus with ICRS

linsen centrum



Case #2 Unilateral Keratoconus with ICRS

linsen centrum



- **Outcome:**
  - Subj. good wearing comfort despite monocular lens fitting
  - VA increases from 0.2p to 1.2p
- **Challenges:**
  - Light-reflexes due to the ICRS remain at dawn to night time
  - ICRS usually present a difficult topography for fitting RGP's
  - scleral lenses usually simplify the fitting

linsen centrum

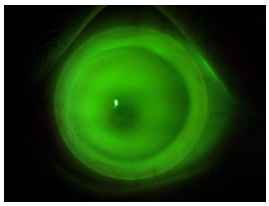
APENDIX KERATOCONE

Apical Clearence

linsen centrum

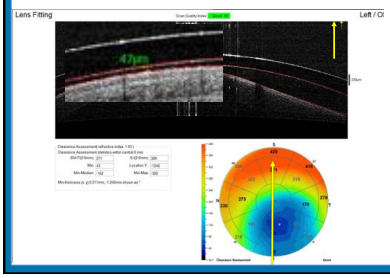
- Ensure clearance at the Apex after 2-3 weeks

- At the Apex as little as possible, as much as necessary
- In the second half of the day min 30-50 µm
- clearance <50 µm cannot be seen on Slit Lamp



Keratoconus

linsen centrum

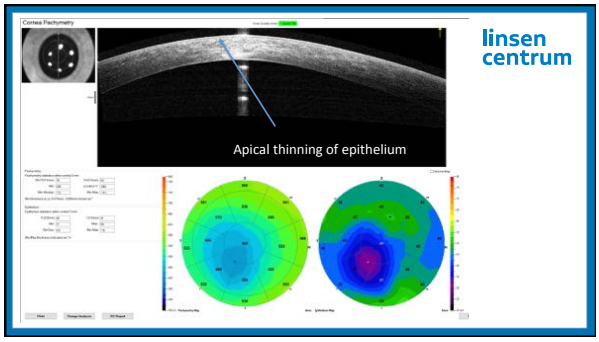


False KC-Progression

linsen centrum

OCT vs. Topography vs. Scheimpflug

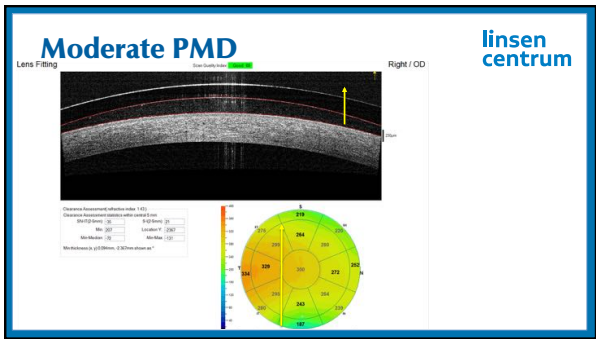
- Epithelial modulation before versus after scleral lens wear:
  - Epithelium is modulated by lid shear forces → Topographic surface regularization
  - Apparent progression (steeper K-values topographically) after scleral lens wear due to lack of lid shear forces
    → Epithelium thickens on Apex
  - Only if stroma is measured, "true progression" can be assessed in pachymetry

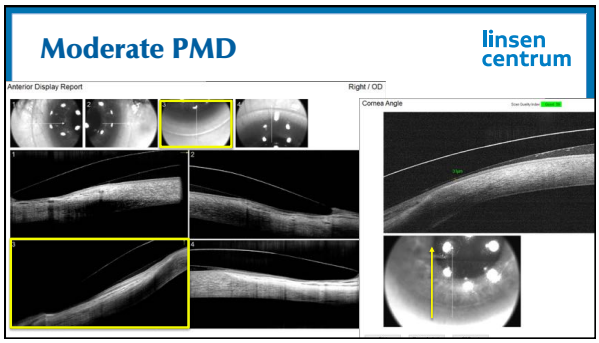


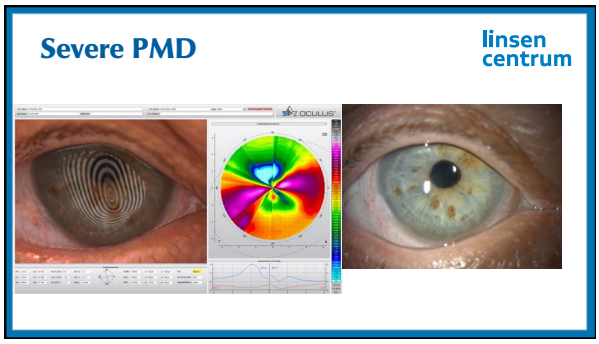
PMD

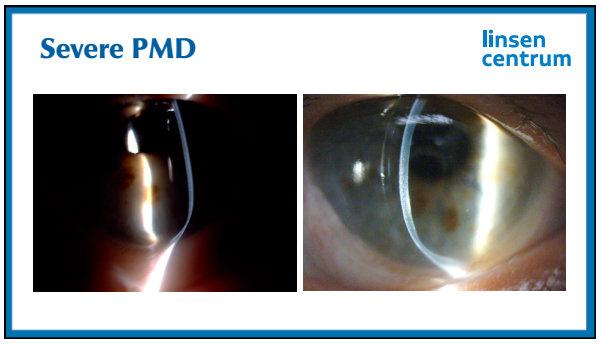
linsen centrum

- Often compromise lens fitting depending on the nature of the PMD and its severity
  - Apex is extremely inferior in the limbal zone of the KL
    - Sometimes slight touch inferior at the Apex
    - OR slight conjuctival edema or conjunctival prolaps inferior
    - OR centrally too much clearence









Take Home Message

linsen centrum

ScCL in Keratoconus

- Mild KC: Consider other options
  - (always consider glasses, to reduce ScCL wearing time)
- Use your "inexpensive aberrometer": **Retinoscopy is a must!**
  - You see what the patient can see
- PMD: fitting of ScCL often with compromises
- ICRS: usually good indication for ScCL's
- Mind apical clearance
  - After lens settling
  - Follow-up: before removing ScCL's (SL or OCT if available)

linsen centrum

PART II
POST-OP CORNEAL CONDITIONS

Irregular astigmatism Post-OP

linsen centrum

- Perforating keratoplasty (pKP)
- Anterior lamellar keratoplasty (DALK)
- Graft restoration
- Radial keratotomy (RK)
- Post-Lasik
- Photo Therapeutic keratectomy (PTK)

Irregular astigmatism Post-OP

linsen centrum

- Challenges
  - Keratoplasty extreme level differences, levels, tilted grafts decentration,...
    - Endothelial cell count can be a limitation for SCL fitting
  - Radial keratotomy & post-lasik
    - Normal peripheral corneal shape with extremely flat center and low sagittal hights
    - Difficult to achieve centrally optimal clearance

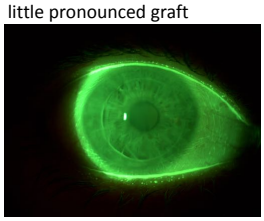
linsen centrum

KERATOPLASTY

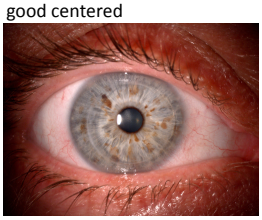
pKP «Graft in niveau»

linsen centrum

little pronounced graft



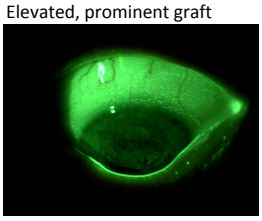
good centered



pKP «prominent graft»

linsen centrum

Elevated, prominent graft

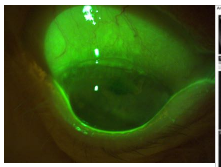


Often more prominent inferior

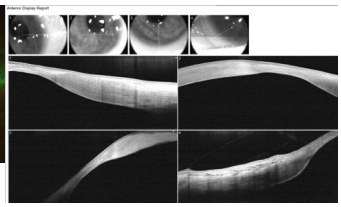
pKP «extreme protruding graft»

linsen centrum

Severe elevation

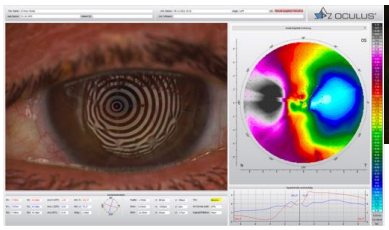


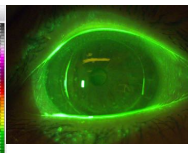
wound dehiszenz in aging grafts



Revers Geometry for pKP

linsen centrum

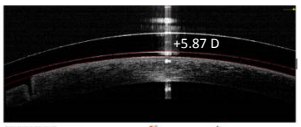


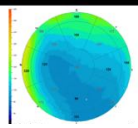


Horizontal incisions for astimatism reduction post pKP

Revers Geometry for pKP

linsen centrum

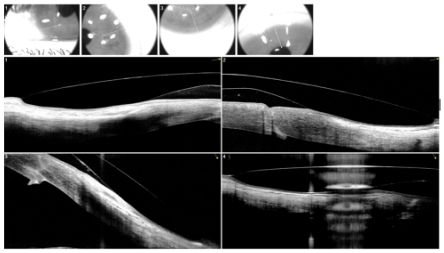




- High oxygen supply
  - High Dk material
  - Low CT of the Lens
    - Difficult to achieve in «plus» powers
  - Revers-geometry to avoid excessive central clearance

Revers Geometry for pKP

linsen centrum



Fitting post-pKP with suture threads

linsen centrum

Improve visual performance with ScCL's due to high irregular astigmatism post-OP

- Caution
  - Wait for the surgeons OK to fit ScCL
  - From 2-6 months depends on:
    - visual demand contra lateral eye
    - Surgery and healing progress/ complication
    - Visual outcome of the graft

Fitting post-pKP with suture threads

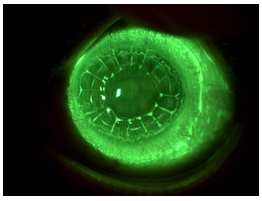
linsen centrum

- Challenges
  - High oxygen demand (= minimal clearance)
  - BUT: Difficult topography profiles
    - Often very flat "crater-like" central zone
    - Steep Limbal transition zone → Suture Edema
  - Don't touch the wound suture

Fitting post pKP with suture threads

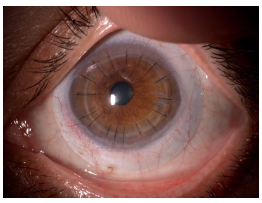
linsen centrum

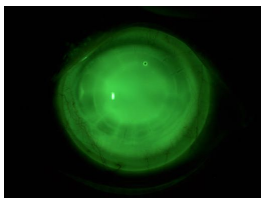
Swollen wound edges



Fitting post pKP with suture threads

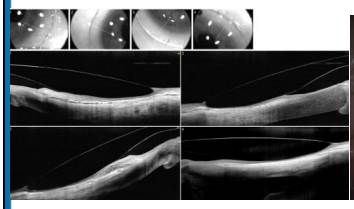
linsen centrum

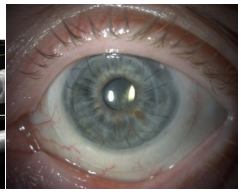




Fitting post re-pKP with suture threads

linsen centrum

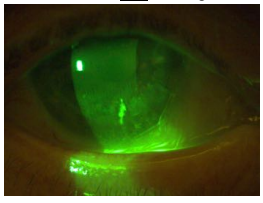




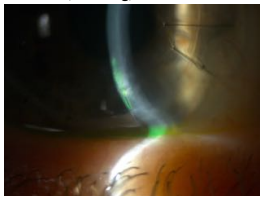
Loose Threads!

linsen centrum

More FB-sensation **after** removing ScCL!



Filament, staining, thread is movable



Take Home Message

linsen centrum

- Different Keratoplasty topographic profiles and SAG's require advanced ScCL geometries
- Re-Grafts are lager in diameter (revers-geometry)
- Graft-Fitting with suture threads
  - Don't touch sutures
  - Instill topical drops (steroid,…) 15-30 before inserting ScCL's
  - Follow-up closely and check for loose threads

linsen centrum

REFRACTIV SURGERY

Refractive Surgery

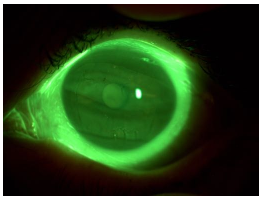
linsen centrum

- Visual demand & complications post refractive surgery
  - Post LASIK,…
  - Radial Keratotomy RK
- Topography:
  - Flat BC, relatively steep periphery
  - RGP's often do not centre due to the flat radii
- After ScCL wear more pronounced flap edges or radial incisions
  - Guess: Missing Lid shear forces for surface regulation
  - influences of insertion fluid to the surface bogging („bath-tub syndrome")

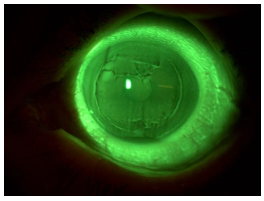
Post LASIK with complication

linsen centrum

Pre ScCL wear



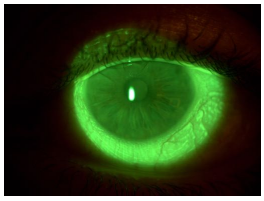
Post ScCL wear



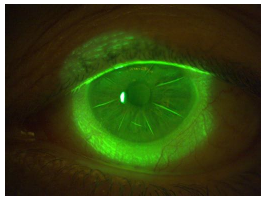
RK with visual demand

linsen centrum

Pre ScCL wear



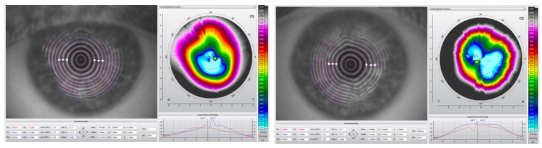
Post ScCL wear



Radial Keratotomy

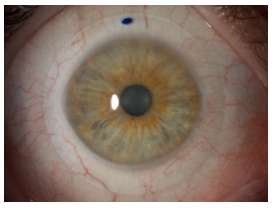
linsen centrum

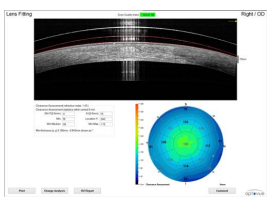
	Ref. (dpt)	Vis cc Brille	K_{flat} (mm)	K_{steep} (mm)	
OD	+7.00 -2.00 141	1.0p	9.86	9.48	Rad. Keratotomy
OS	+7.00 -1.25 124	1.0p	9.52	9.06	Rad. Keratotomy



Radial Keratotomy

linsen centrum





Take Home Message

linsen centrum

- Extreme flat cornea situations are an indication for scleral lenses
  - Radial keratotomy due to very flat cornea radii and fluctuation during the day of in extreme cases +/-4dpt
  - Post-Lasik situations, etc.
  - Often plus powers required (lens thickness increased)

linsen centrum

CORNEAL SCARRING & IRREGULARITIES

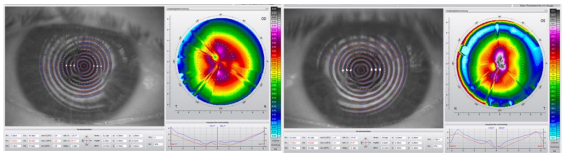
Corneal irregularities

linsen centrum

- Various pathological conditions
- Scarring
  - Infectious
  - traumata

Granular Corneal Dystrophy (GCD I)

linsen centrum

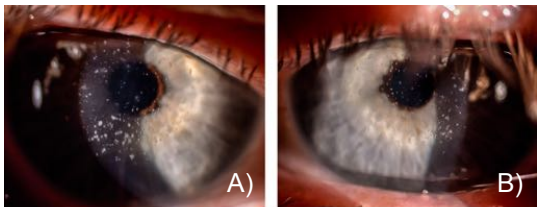


OD: Topo 2 Mon Post-PTK

OS: Topo 2 Mon Post-PTK

Granular Corneal Dystrophy (GCD I)

linsen centrum

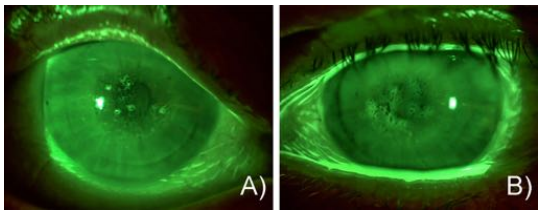


A) OD Post-PTK

B) OS Post-PTK

Granular Corneal Dystrophy (GCD I)

linsen centrum

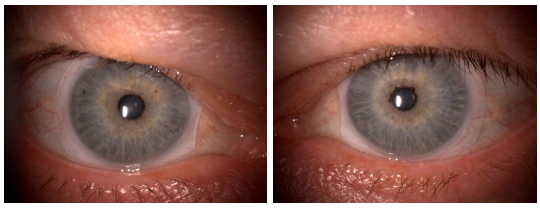


A) OD Post-PTK

B) OS Post-PTK

Granular Corneal Dystrophy (GCD I)

linsen centrum



Granular Corneal Dystrophy (GCD I)

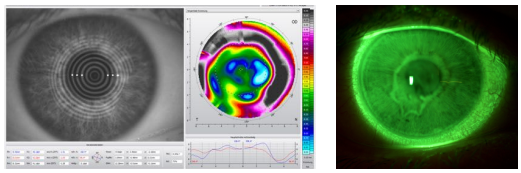
linsen centrum

- Outcome:
  - Visus: OD: 1.2p OS: 1.0
  - Massive improvement of vision and quality of life ☺
  - Pt. Has not seen as good for decades ☺
  - High contrast, no double images and shadows, hardly glare at dusk ☺
- Challenges:
  - Pinguecula had to be relieved OU with notches nasally

Corneal scar

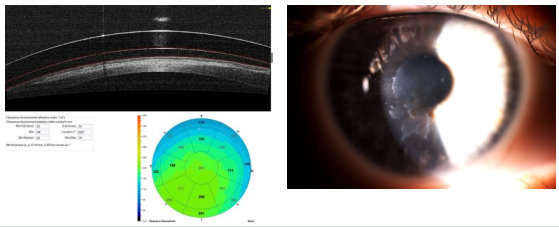
linsen centrum

Monocular fit after infectious corneal central scar



Corneal scar

linsen centrum



linsen centrum

PART IV
THERAPEUTIC INDICATIONS

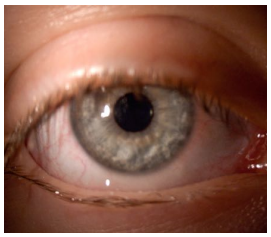
ScCL therapeutic indications

linsen centrum

- Severe DED
  - GVHD, Sjögren, Steven Jonson
- Exposition keratitis
- Neurotrophic keratopathy
- Cosmetic / Prosthetic scleral lens fit
  - Congenital cosmetic changes
  - aquired traumatic changes

Lagophthalmus

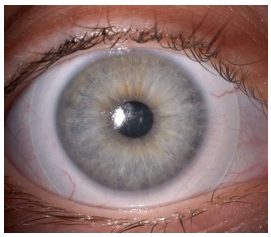
linsen centrum



- Facialis paresis (CN 7)
- severe exposure keratitis, conjunctival injection and mild chemosis
- Subj. severe dry eye sensation, discomfort and pain, redness
- Fit of protective scleral lens

Lagophthalmus

linsen centrum



Outcome:

- massive improvement in subjective & objective symptoms
- despite eyepatch / wet chamber@ night Pt. Has red eye mornings
- EoD: redness is lowest in the evening with the lens

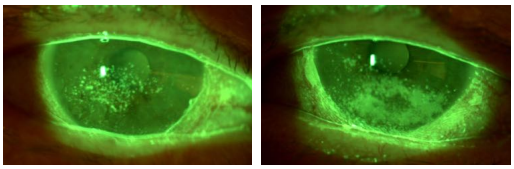
Challenges:

- Poor wetting due to only manual lid closure, ointments, gels,...

GVHD (Graft-Versus-Host Disease)

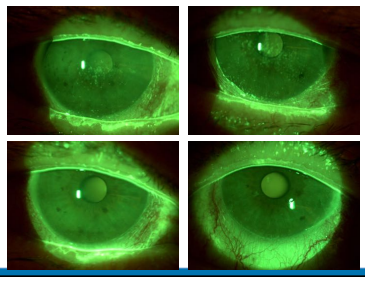
linsen centrum

Autoimmune response after bone marrow transplantations :
Reduced lacrimation Keratoconjunctivitis Sicca
Dry sensation, pain, discomfort, photophobia



GVHD

linsen centrum



After 1 Month

ScCL's 3-4 hrs/day

Symptoms subj. strongly improved

After 3 months

ScCL's 4-6 hrs./day

Symptoms further improved, Pt. can no longer imagine how she had endured this before!

Protective Role of Scleral Lenses

linsen centrum

OPTICAL- PROSTHETIC SCLERAL LENSES

Partial occluding scleral lenses

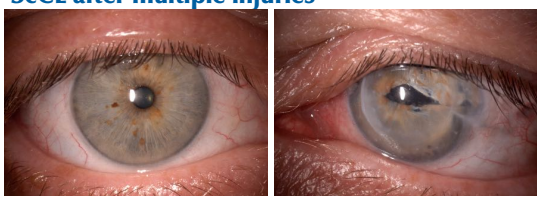
Optical-prosthetic ScCL

linsen centrum

- Visual rehabilitation combined with artificial iris aperture
  - Refractive errors
  - Corneal irregularities
    - Injuries or infectious
  - Congenital iris defects
  - Iris traumata
  - Surgery complications with iris defects

Optical-, Prosthetic, therapeutic ScCL after multiple injuries

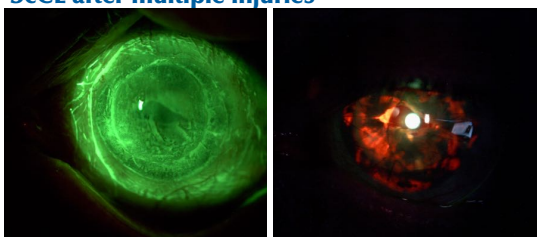
linsen centrum



Truckdriver with 3 traumatic injuries on 3 different occasions on the left eye, KP, Re-PKP, IOL, Iris reconstruction

Optical-, Prosthetic, therapeutic ScCL after multiple injuries

linsen centrum



Optical-, Prosthetic, therapeutic ScCL after multiple injuries

linsen centrum

Vis_{sc}: <0.05 Vis_{cc} ScCL without iris print: 0.2p
Vis_{cc} ScCL with Print: 0.5p

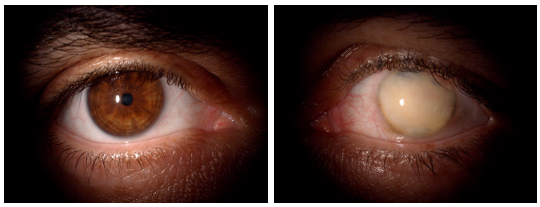
linsen centrum

COSMETIC/ PROSTHETIC SCLERAL LENSES

Partial or full occluding scleral lenses

Prosthetic Scleral Lens

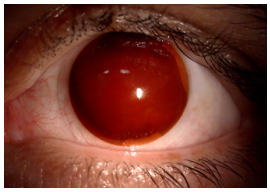
linsen centrum



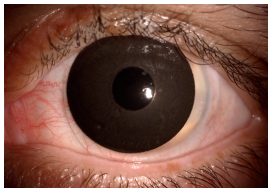
OD: Small caliber gun protectile injury with age 12 yrs., now 50yrs., Exo position

Prosthetic Scleral Lens

linsen centrum



OS: Old soft lens with brown tint
in adduction (right gaze, comfort issues



New full occlusion print SCL, max. decentration, for ortho appearance
Huge comfort improvement vs. Softlens

Prosthetic Scleral Lens

linsen centrum

OD: normal eye

OS: medium gun protectile injury, shrinking of the bulbus/cornea over the years.

Case #11 Prosthetic Scleral Lens

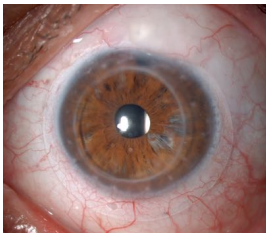
linsen centrum

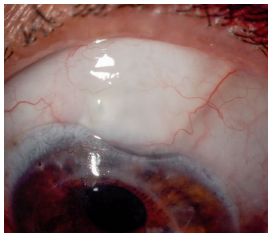
linsen centrum

SCLERAL LENS LIMITATIONS AND CONTRA-INDICATIONS

Filtering bleb

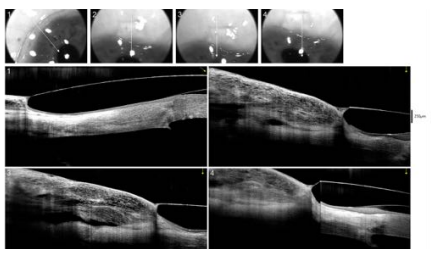
linsen centrum





Filtering bleb

linsen centrum



Caution with Filtering blebs

linsen centrum

- Notching or micro-vaulting to avoid blockage of aqueous outflow
- Watch IOP!!!
- Instruct for glaucoma drug application before and after scleral lens wearing
  - Apply drugs at least 15min prior to lens insertion

Buphthalmus

linsen centrum

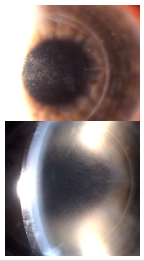
- Cornea diameter 16.8mm
- Extremely low IOP
- Unstable sclera and cornea
- scleral lens with diameter 16.0mm

Endothelial cell function

linsen centrum

Low endothelial cell counts with aging grafts:
< 800 c/mm² may cause edema

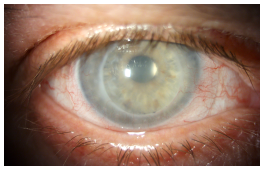
- Occasionally possible with very low cell count
  - Perform a «Stress-Test» with ScCL
- Insert scleral lenses after overnight edema is fully resolved, in the case of critical endothelial cell count
  - let patient check for Halo's
  - if patient has marked overnight edema, indicates low success for ScCL's



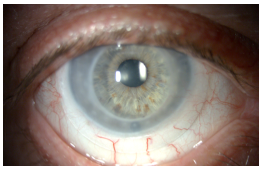
Graft decompensation

linsen centrum

Graft decompensation with scleral lens



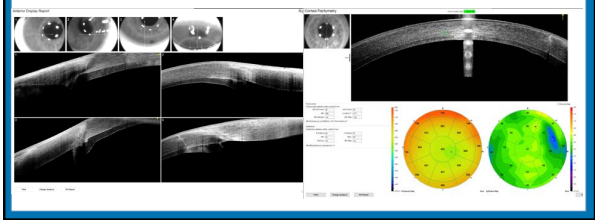
Post DSAEK: same lens geometry but refractive change +2 D



DSAEK

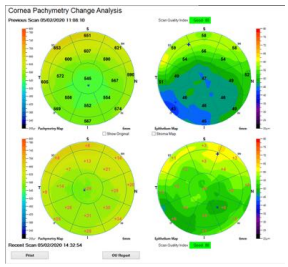
linsen centrum

ScCL refit 6 weeks post DASEK

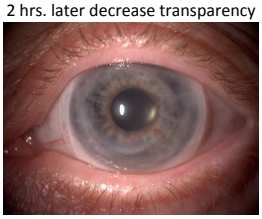


Endothelial «Stress-Test»

linsen centrum



2 hrs. later decrease transparency



Re-perforation Keratoplasty

linsen centrum

3 Month Post re-pKP

- Patient ☺ has not seen as good for several decades as after the re-pPK with ScCL
  →Contra lateral re-transplant will follow

Interface fluid Syndrome IFS

linsen centrum

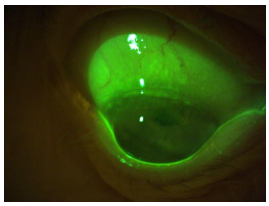
- Condition after LASIK, Fuchs dystrophy, DSAEK.
- IFS after scleral lens wear with DK/t 200 & minimal postlens reservoir of 30-40 microns.

Figure 1 Interface fluid on slit lamp examination Figure 2 Interface fluid collection on anterior segment OCT

DOI: 10.1055/a-1068-8896 Klinische Monatsblätter für Augenheilkunde 2020; 237(04): 406 - 407

Extreme and old Corneal-Grafts

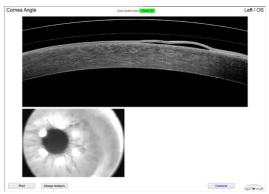
linsen centrum



- With extreme grafts
  - High SAG's required
  - suction forces ↑
  - Air bubbles ↑
  - Conjunctival prolapse ↑

Extreme and old Cornral-Grafts

linsen centrum



- Sometimes sup-epithelial fluid can occur

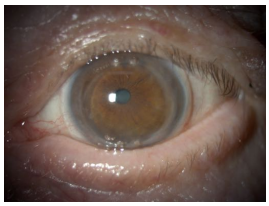
What's the solution?

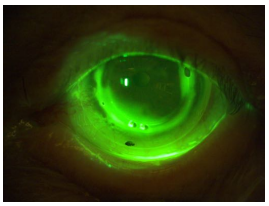
→ Back to the roots:

- Smaller diamter
- Corneal bearing
- ventilation

Corneo-Scleral fit with ventilation

linsen centrum





Take Home Message

linsen centrum

- Scleral lenses can be applied in many pathological corneal changes and can increase QoL substancially!
- Apply creativity to your fitting experience of normal scleral lenses and strive for the best possible, tolerable and responsible lens fit
- Follow up, follow up, follow up, ...

Clincal pearls

linsen centrum

- Check Pachymetry (KC progression, graft edema,…)
- Use your retinoskopy skills as «vision analyzer»
- In low KC consider other options i.e. soft disposable lenses
  - Always measure refraction and consider glasses, to reduce daily ScCL wearing time
- Instruct patients in correct drug application with ScCL's
- **Be careful but with a good grain of boldness!**

linsen centrum
